

Tac-Com: Week 7 User Story

User Story

Implement CharAbility, CharClass, and Item to pass existing NUnit Framework test cases. This includes for CharAbility the ability name existing, having an empty ability list, and mp cost is handled correctly. For CharClass, the class name is correct, the ability list is empty. For Item, implementation will include having an item name, having an item type, and having an empty list of item abilities. If time permits, there might be more functionality added to CharAbility, CharClass, Item, and Character classes with associated test cases.
